Sexual Deviance and Society

Over the last two decades, empirical evidence has increasingly supported the view that it is possible to reduce re-offending rates by rehabilitating offenders rather than simply releasing them. In fact, the pendulum's swing back from a pure punishment model to a rehabilitation model is arguably one of the most significant events in modern correctional policy. This comprehensive review argues that rehabilitation should focus both on promoting human goods (i.e. providing the offender with the essential ingredients for a 'good' life), as well as reducing/avoiding risk. Offering a succinct summary and critique of the scientific approach to offender rehabilitation, this intriguing volume for students of criminology, sociology and clinical psychology gives a comprehensive evaluation of both the Risk-Need Model and the Good Lives Model. Rehabilitation is a value-laden process involving a delicate balance of the needs and desires of clinicians, clients, the state and the public. Written by two international leading academics in rehabilitation research, this book argues that intervention with offenders is not simply a matter of implementing the best therapeutic technology and leaving political and social debate to politicians and policy makers.

Crime Science

This unique, engaging book uses a multi-disciplinary approach in an effort to understand the “evil minds” of criminals that engage in premeditated violence. The book examines the role of “the mind” and the “brain” in the commission of violence, and thereby provides readers with a foundation in criminological theory and criminological methods. The book includes a wealth of empirical data that can be used by criminologists, forensics scientists, and other professionals to understand and respond to violent criminals. A three-part organization covers: violent crimes; types and patterns of violence; and violence at multiple levels. The book also looks at violence at multiple levels: individual, family, neighborhood, cultural, and across multiple perspectives and systems, examining violence from international cross-cultural perspectives, with chapters that examine both quantitative and qualitative research.

Evil Minds

Comprehensive and accessible, Tim Newburn’s bestselling Criminology provides an introduction to the fundamental themes, concepts, theories, methods and events that underpin the subject and form the basis for all undergraduate degree courses and modules in Criminology and Criminal Justice. This third edition includes: A new chapter on politics, reflecting the ever increasing coverage of political influence and decision making on criminology courses; New and updated crime data and analysis of trends, plus new content on recent events such as the Volkswagen scandal, the latest developments on historic child abuse, as well as extended coverage throughout of the English riots; A fully revised and updated companion website, including exam, review and multiple choice questions, a live Twitter feed from the author providing links to media and academic coverage of events related to the concepts covered in the book, together with links to a dedicated textbook and revision website.

Psychology and Crime

From a team of leading experts comes a comprehensive, multidisciplinary examination of the most current research including the complex issue of violence and criminal behavior. The handbook examines a range of theoretical, policy, and research issues and provides a comprehensive overview of aggressive and violent behavior. The breadth of coverage is impressive, ranging from research on biological factors related to violence and behavior-genetics to research on terrorism and the impact of violence in different cultures. The authors examine violence from international cross-cultural perspectives, with chapters that examine both quantitative and qualitative research. They also look at violence at multiple levels: individual, family, neighborhood, cultural, and across multiple perspectives and systems, including treatment, justice, education, and public health.

Integrative and Eclectic Counselling and Psychotherapy

Psychological Criminology addresses the question: what is it about individuals and their experiences that cause them to commit crime and/or to become criminal? This book provides a comprehensive coverage of psychological theories of crime and criminality, exploring theories focusing on factors present at birth (human nature, heredity); theories that focus on factors that influence the offender over the lifespan (learning, development) and theories focusing on factors present at the crime scene. It emphasizes the connections among the different approaches, and demonstrates how, taken together rather than as rival explanations, they provide a more complete picture of crime and criminality than each provides individually. Theories are arranged throughout the book in a temporal sequence, from distal to proximal causes of criminal behavior. The analysis spans 100,000 years, from the evolutionary roots of criminal behavior in the ancestral environments of early humans on the African savanna, to the decision to engage in a specific criminal act. Key features of the book include: a focus on theory - 'explaining' crime and criminality, an integrative approach, accessible to readers who do not have a background in psychology.
The diversity of animal signals has been widely documented, and the generality of animal signals also tantalizingly suggests that there are common mechanisms that have selected for their origin. However, while much progress has been made on some fronts, we still lack a general theory of the diversity of signaling. Understanding the diversity of signals will directly address this gap by focusing on an exciting new arena of sexual selection, namely using functional approaches to understand signaling. This approach is rooted in the idea that many signals are designed to transmit important functional information that is both important for issues of male quality and hence male competition, sexual, and female choice. The increasing use of technology in sexual selection studies has enabled researchers to test whether signaling is either constrained by, or accurately transmits information about functional capacities. Further, in animals that fight vigorously, functional capacities such as endurance or strength may make the difference between winning and losing. This volume brings together a diverse collection of researchers who are actively investigating how function and signaling are related. These researchers use both a variety of methods and taxa to study animal signaling, and we believe that this integrative view is important to open up fresh vistas for why animal signals have evolved.

Environmental Criminology and Crime Analysis

Barak provides the first integrated analysis of crime, criminal justice, and criminology through a global lens, revealing the importance of a global perspective for the study of crime and justice in the 21st century. While moving seamlessly from the micro bio-psychological, interactive-social process to the macro cultural-structural forces that shape crime and our responses to it, the author presents the reader with a feast of the latest criminological ideas in this sumptuous tome.

Criminology Goes to the Movies

This edition of Introduction to Forensic Psychology has been completely restructured to map to how courses on forensic psychology are taught, and features more figures, tables, and text boxes, textbook pedagogy. Unique this book offers equal representation of criminal behavior, the court systems, and law enforcement/prisons. It also has equal representation of criminal and civic forensics and of issues pertaining to adults and children. New coverage of emerging issues in forensic psychology expanded case illustrations and vignettes, practice and ethics updates, and international trends new 'key issue' overviews, boldface terms and concepts, and chapter reviews expanded coverage of corrections for juveniles

Integrative Counselling & Psychotherapy

Criminology: Today: An Integrative Introduction is a clear, contemporary and comprehensive introduction to the study of criminology. Offering a thematic approach that contrasts the social responsibility and social problems approaches to crime theory, the book encourages students to think critically about the causes of crime. Completely up-to-date, this edition includes new Professor Speaks excepts, links to cutting-edge articles, and MyCrimeKit activities that encourage students to explore how security and freedom interface in an age of increasing globalization.

Theories of Counseling and Psychotherapy

This book provides an introduction to crime science, setting out its essentials. It provides a major statement of the nature and aspirations of the science, and presents a series of case studies providing insights, in different settings, of the approach in action, ranging from preventing crime within correctional institutions to the use of techniques such as DNA fast tracking for burglary.

Criminal Lessons

Counseling Psychology: An Integrated Positive Approach introduces a new dimension in counseling psychology which includes both symptom treatment and positive psychology; this unique approach guides readers to enhance clients' positive potential, rather than focusing solely on the treatment of clients' negative sympotms. An integrative counseling approach which maximizes graduates' understanding of counseling theories and positive psychology. Enables counselors to tailor integrative counseling to facilitate clients, helping gradual students and mental health professionals become culturally sensitive. Discusses how clients manage day to day living, and can even thrive despite severe symptoms.

Rehabilitation

This book provides step-by-step procedures to help police administrators execute their duties and fulfill their responsibilities more effectively, efficiently and productively. Divided into sections-behavioral aspects of police management, functional aspects of police management, major issues-it introduces the reader to a broad range of topics with which all police managers should be familiar.

Psychological Criminology

Why do people commit crimes? How can crime be prevented? And what can society and criminal justice professionals do to implement constructive responses to criminal behavior? Summarizing what he has learned about crime and criminals during his long career, one of social work's most distinguished theoreticians speculates about the factors that lead to crime and considers what we can do to prevent and respond to it meaningfully. Criminal Lessons is based on more than thirteen thousand cases in which Frederic G. Reamer has been involved as a parole board member, a role that was supplemented by his earlier experiences working in a federal correctional facility, a state pen, and a forensic unit in a state psychiatric hospital. Reamer presents an original and compelling typology of crime that classifies offenders on the basis of the circumstances that led to their offenses. He isolates seven categories, tracing crime to desperation, greed, rage, revenge, frolic, addiction, or mental illness. Using actual case studies to illustrate these patterns of 'criminal circumstances,' Reamer presents a model for the prevention of, and response to, crime and throughout the book offers recommendations related to social services, criminal justice, and public policy.

The Assessment and Treatment of Women Offenders

From experts on working with court-mandated populations, this book shows how motivational interviewing (MI) can help offenders move beyond resistance to treatment and improve personal compliance. MI provides an evidence-based approach that promotes successful rehabilitation and reentry by drawing on clients' values, goals, and strengths—not simply telling them what to do. The authors clearly describe the core techniques of MI and bring them to life with examples and sample dialogues from a range of criminal justice and forensic settings. Of crucial importance, the book addresses MI implementation in real-world offender service systems, including practical strategies for overcoming obstacles. This book is in the Applications of Motivational Interviewing series, edited by Stephen Rollnick, William R. Miller, and Theresa B. Moyers.

Prologue to Violence

In a society where sexualized media has become background noise, we are frequently discouraged from frank and open discussions about sex and offered few tools for understanding sexual behaviors and sexualities that are perceived as being out of the norm. This book encourages readers to establish new ways of thinking about stigmatized peoples and behaviors, and to think critically about gender, sex, sexuality and sex crimes. Sexual Deviance and Society uses sociological theories of crime, deviance, gender and sexuality to construct a framework for understanding sexual deviance. This book is divided into four units: Unit I, Sociology of Deviance and Sexuality, lays the foundation for understanding sex and sexuality through sociological frameworks of deviance. Unit II, Sexual Deviance, provides an in-depth discussion to its readers about the sociological constructions of sexual deviance with a critical focus on contemporary and historical conceptualizations. Unit III, Deviant Sexual Acts, explores a variety of deviant sexual acts in detail, including sex in public, fetishes, and sex work. Unit IV, Sex Crimes and Criminals, examines rape and sexual assault, sex crimes against children, and societal responses to sex offenders and their treatment within the criminal justice system. Utilizing an integrative approach that creates a dialogue between the subjects of gender, deviance, and globalism, this book is a key resource for students interested in crime and deviance, gender and sexuality, and the sociology of deviance.

Criminology
An Integrative Approach to Counseling: Bridging Chinese Thought, Evolutionary Theory, and Stress Management offers a global and integrative approach to counseling that incorporates multiple concepts and techniques from both eastern and western perspectives. The book identifies commonalities and differences between the two cultures and cultures in counseling, which is a necessary step in understanding the function of western counseling with those of the Chinese perspectives of Confucianism, Daoism, and Buddhism, relative to integrating and applying a more global approach to helping individuals functionally adapt to challenges in their environments. This book will be used by faculty and students in those undergraduate and graduate courses in psychology, counseling, or social work that cover such areas as introduction to counseling, counseling skills and techniques, counseling theories, multi-cultural awareness and counseling, and stress management.

Psychology and Crime

Brief Therapy with Couples

The Forensic Psychologist’s Report Writing Guide is the first book to provide both student trainees and practitioners with best practice guidance for describing the core skills of their role. Written and edited by an international range of experts from the UK, North America and Australia, this gives a clear overview of the range of assessments, from forensic tests to personal aid, and includes real-life examples to illustrate key points. Uniquely, the book also offers guidance on the range of different client groups that forensic psychologists work with across both civil and legal contexts, including juveniles, female clients, couples and those with cognitive impairments. From core principles to written style to key issues, this book also includes a checklist of advice and further reading. Comprehensive and practical, The Forensic Psychologist’s Report Writing Guide is a user-friendly companion to this critical and often overlooked skill, and will be essential reading for both neophyte and experienced forensic psychologists alike.

Introduction to Forensic Psychology

Brief Therapy with Couples is a practical guide to brief therapy for couples & relationship problems, that relates therapy to the cultural, racial, & religious context of relationships, as well as key issues like parenting & same-sex relationships.

Reinforcement Sensitivity Theory

In reviewing introductory texts available to criminologists, one is left with the impression that biological factors are irrelevant to the formulation of criminal behavior. Where biology is mentioned at all, it receives infinitesimal coverage. This dearth of attention could at one time be blamed on shoddy research and the illegitimate fear that evide

The Forensic Psychologist’s Report Writing Guide

This is an accessible and user friendly guide to the theory and practice of relational counselling and psychotherapy. It offers a meta-theoretical framework for the integration of the three most popular counselling and psychotherapy modalities: humanistic, psychodynamic and Cognitive-behavioural including mindfulness and compassion based approaches This exciting new text: - outlines the history of integration in the field of psychotherapy and counselling - clarifies the nature of psychotherapeutic integration - defines different models of integration - provides a clear and rich discussion of what it means to work relationally - outlines a coherent and flexible framework for practice as well as a technique - demonstrates how this framework can be successfully utilised both in brief and long-term therapy for a wide range of client issues and problems - provides a detailed guide to working with the Relational-Integral Model (RIM) for a range of professional issues, including ethics, research, supervision, therapist self-care and personal development Brimming with vivid case examples, mind-maps and therapeutic dialogue, this invaluable book will help develop the theoretical knowledge and skills base of students, trainers and practitioners alike.

Interpersonal Violence

Some of the brightest minds in criminology who were nurtured on the strictly environmentalist paradigm of the 20th century have declared that biosocial criminology is the paradigm for the 21st century. This book attempts to unite this ever-growing field with the premier neuropsychological theory of personality, otherwise known as reinforcement sensitivity theory (RST). Anthony Walsh places the highly variable number of biosocial approaches under a single theoretical umbrella, whilst providing a unique integrative framework. As the leading neuropsychological theory of personality and behaviour in psychology today, RST focuses around the age-old question of how naturally selfish social animals can achieve their wants and needs without alienating others in their social groups. RST posits that evolution has built into humans three intersecting systems: the behavioral approach system; the behavioral inhibition system; and the fight-flight/ freeze system. RST identifies the key mind-maps and neurological and behavioral functions underlying each system and has found a cascade of supporting evidence. Throwing new light on many areas of concern to criminologists, such as psychopathy, violence, ADHD, and schizophrenia, this book will be of interest to scholars and upper-level students in the field. Additional features such as Focus Boxes and diagrams delve into measurement techniques and brain areas.

Biological Influences on Criminal Behavior

This book explores the links between psychology and crime, evaluating psychological explanations of crime and the use of psychology within the criminal justice system. It provides a comprehensive overview that highlights the consequences of crime for victims, offenders and wider society. The book combines classic theory with new developments in eyewitness testimony, offender profiling and forensic psychology. The book builds on a broad range of current theories and techniques to support the learning process: chapter overviews; study questions; and further reading. Lively and accessible, it is essential reading for students and academics in criminology, sociology and psychology. The Key Approaches to Criminology series celebrates the removal of traditional barriers between disciplines and, specifically, reflects criminology’s interdisciplinary nature. It brings together leading scholars at the intersection of criminology and related subjects. Each book in the series helps readers to make intellectual connections between criminology and other discourses, and to understand the importance of studying crime and criminal justice within the context of broader debates. The series is intended to have appeal across the entire range of undergraduate and postgraduate studies and beyond, comprising books which offer introductions to the fields as well as advancing ideas and knowledge in their subject areas.
Research Methods and Statistics

There is a large body of research that provides guidance for working with offenders on how they should be treated once they are in the correctional system. The problem is that most, if not all this research has been conducted on male populations and it is assumed that women offenders are the same. However, women have different needs and support systems than men in some areas of their lives and it is unclear how women offenders will be generalized in this way. This book provides a review of the research literature to guide evidence-based practice in the assessment and treatment of adult female offenders. An historical overview of women’s crime and imprisonment will be followed by a global review of various theories of female criminality. The remainder of the book reviews the psychology of criminal conduct, with a specific focus on three psychological principles of effective intervention: risk, need and responsivity. Respectively, few these principles set the “who”, “what” and “how” for correctional intervention.

Management Accounting

Stephen Palmer is Joint award winner of the Annual Counselling Psychology Award for outstanding professional and scientific contribution to Counselling Psychology in Britain for 2000. The editors’ support for the integrative project is clear, but the book will hold its own with the sceptics too. I recommend it’ - Counselling at Work This innovative and timely book examines the issues surrounding integration and eclecticism in a therapeutic context, and provides a detailed account of a wide range of approaches in use. Following an explanation of the principles of integrative and eclectic processes, 10 approaches are explained in detail. Chapters on each approach describe its central concepts, assumptions and therapeutic goals; outline its view of how psychological disturbance is acquired, perpetuated and resolved; examine how the theory relates to practice - including examples of typical sessions and case studies; and consider which clients might benefit. Further chapters explore the implications of using integrative and eclectic approaches for training, supervision, for working in a time-limited context and from a multicultural perspective.

Forensic Psychologists Casebook

This breakthrough edition of Theories of Counseling and Psychotherapy: An Integrative Approach, by Ellie Jones-Smith, sets a new standard in counseling theories books. The Second Edition goes beyond expert coverage of traditional and social constructivist theories with coverage of the contemporary approaches to psychotherapy. Each of the book’s individual chapters on novelty and the strengths-based therapy, neuroscience and neuropsychotherapy, motivational interviewing, and the expressive arts therapies. In every chapter, the case study of a preadolescent boy demonstrates how each theory can be applied in psychotherapy. Up to date and easy to read, the book engages readers with inner reflection questions that help them apply the theories to the lives of their clients and shows them how to develop their own integrative approach to psychotherapy.

Motivational Interviewing with Offenders

The media continue to have a significant persuasive influence on the public perception of crime, even when the information presented is not reflective of the crime rate or actual crime itself. There have been numerous crime rate or acts on fear of crime in the media, but few have considered this from a social psychological perspective. As new media outlets emerge and public dependence on them increases, the need for such awareness has never been greater. This volume lays the foundation for understanding fear of crime from a social psychological perspective in a way that has not yet been systematically presented to the academic world. This volume brings together an international team of experts and scholars to assess the role of fear and the media in everyday life. Chapters take a multidisciplinary approach to psychology, sociology and criminology and explore such topics as dual process theory, construal level theory, public fascination with gangs, and other contemporary issues.

Criminology Today

Biochemistry addresses the diverse needs of premed, biochemistry, and life science majors by presenting relevant material while still preserving a chemical perspective. Presented within the next generation of WileyPLUS, Biochemistry emphasizes worked problems through video walkthroughs, interactive elements and expanded end-of-chapter problems with a wide range of subject matter and difficulty. The worked problems in the course are both qualitative and quantitative and model for students the biochemical reasoning they need to practice. Students will often be asked to analyze data and make critical assessments of experiments.

An Integrative Approach to Counseling

Despite mounting references to the “transgenerational transmission of violence,” we still lack a compelling understanding of the linkage between the interpersonal violence early life and the criminal violence of adulthood. In Prologue to Violence, Abby Stein draws on the gripping narratives of 65 incarcerated subjects and extensive material from law enforcement files to remedy this lacuna in both the forensic and psychodynamic literature. In the process, she calls into question prevailing beliefs about criminal character and motivation. For example, references to which additives or drugs are said to be responsible are not available for reflection. Contrary to common belief, these criminals, especially sex murderers, do not commit their crimes in a rational or fully conscious way. They are not driven by deviant fantasy, their psychopathy is not inborn, and they rarely commit acts of violence “without conscience.” Stein’s interdisciplinary analysis of her data infuses contemporary relational psychoanalysis with the insights of neuroscience, traumatology, criminology, and cognitive and narrative psychology. A powerful challenge to offender treatment programs to address the shaping impact of childhood trauma rather than merely to “correct” the cognitions of violent offenders, Prologue to Violence will be equally compelling to researchers in academia. Focus on mental health care and abuse will be broad and deep, ranging beyond clinicians who work with offender populations to all therapists who wrestle with experiences of dissociation and aggressive enactment in everyday life.

Biochemistry

The question of ‘why’ and ‘how’ certain individuals are drawn towards behaving in a way that contravenes the ‘Law of the Land’ is not an easy one to address. Researchers from various different fields have nevertheless attempted to develop theoretical explanations for the existence of different types of crime and why some individuals commit such acts. Crime and Criminality draws on criminology, sociology, psychology and neuroscience to offer a broad overview of crime, criminality and criminality. Coverage includes: a comprehensive discussion of theoretical approaches to criminal behaviour, including biological, social and ‘rational choice’ approaches; an analysis of legal and social definitions of crime and how these definitions influence the way specific behaviours are labelled as criminal; an examination of types of crime and offenders; and an exploration of different ways in which crime is predicted, including risk assessment and offender profiling and an overview of investigative techniques. Addressing a broad range of topics and offering a synthesis of competing theoretical explanations of criminality, this book is essential reading for students taking courses in criminology, criminal psychology, criminal behaviour, forensic psychology and psychological criminology.

The Psychology of Criminal Conduct

This book aims to demonstrate how forensic psychology contributes to police investigations, providing practical information about the type of reports provided by psychologists and behavioural advisors, and set within a broader theoretical context. It asks the question ‘What do practitioners actually do when they provide advice for the police and the courts and how do they do it?’ The contributors to the book are all expert in the field of offender profiling and behavioural advice. The chapters provide valuable insights into particular case details, the ethical and legal consequences of advice, coverage of the relevant theoretical context, explanations for conclusions drawn, practical difficulties in preparing reports, potential pitfalls, and an account of how cases are resolved.

Counseling Psychology

‘Criminologists have been waiting a very long time for a psychology of crime that speaks their language. Finally it has arrived.’ - Dr David Gadd, Keele University Now in an updated second edition, this book explores the links between psychology and crime, taking the reader through psychological explanations of crime and the use of psychology within the criminal justice system. The book aims to demystify some of the myths of psychological criminology and situates the subject within its historical and theoretical foundations, whilst maintaining a contemporary outlook and critical awareness of the field’s advantages and limitations. This second edition includes: Four new chapters, on
'Psychological perspectives and their approach to crime', 'Mentally disordered offenders', 'The Criminal Courts and the role of the Jury', and 'Victims, Fear of Crime and Offender Management'. Improved coverage of the issues around interpersonal violence, sexual violence and deviancy, the psychology of crime in groups, and war crimes. Increased analysis of psychology and the criminal justice system. Essential reading for students in criminology, sociology and psychology.

Handbook of Forensic Assessment

From early modernity to today, society has encountered various forms of interpersonal violence. Through exploration of particular areas within Europe and Russia to Africa, America and Asia, this collection presents both differences and connections among various forms of interpersonal violence in different times, places, institutional orders and relationships. Interpersonal Violence introduces research results from studies in various disciplines, such as history, sociology, social policy, social work, cultural studies, and gender studies. In focusing on the diverse and often ignored social locations and cultural backgrounds of interpersonal violence, the book demonstrates 1) how the specificity of temporality and spatiality affect the manifestation of violence, 2) how the dynamics of intersectional and institutional differences are located in social space and time, and 3) how the different forms of violence in different times are affectively, conceptually and discursively connected. With its comprehensive and integrative approach, this book is a key tool for understanding the phenomenon and cultural conceptions of interpersonal violence. It would be most suitable for upper level undergraduates, graduates doctoral students interested in social sciences, history, criminology, psychology, cultural studies, education, gender studies and public health.

Criminology

This innovative text offers a completely integrated approach to teaching research methods and statistics by presenting a research question accompanied by the appropriate methods and statistical procedures needed to address it. Research questions and designs become more complex as chapters progress, building on simpler questions to reinforce student learning. Using a conversational style and research examples from published works, this comprehensive book walks readers through the entire research process and includes ample pedagogical support for SPSS, Excel, and APA style.

The Oxford Handbook of Intergroup Conflict

With insightful chapters from key social psychologists and peace scholars, this handbook offers an integrative and extensive overview of critical questions, issues, processes, and strategies relevant to understanding and addressing intergroup conflict.

Animal Signaling and Function

Psychological Criminology addresses the question: what is it about individuals and their experiences that cause them to commit crime and/or to become criminal? This book provides a comprehensive coverage of psychological theories of crime and criminality, exploring theories focusing on factors present at birth (human nature, heredity); theories that focus on factors that influence the offender over the lifespan (learning, development); and theories focusing on factors present at the crime scene. It emphasizes the connections among the different approaches, and demonstrates how, taken together rather than as rival explanations, they provide a more complete picture of crime and criminality than each provides individually. Theories are arranged throughout the book in a temporal sequence, from distal to proximal causes of crime. The analysis spans 100,000 years, from the evolutionary roots of criminal behaviour in the ancestral environments of early humans on the African savana, to the decision to engage in a specific criminal act. Key features of the book include: a focus on theory – 'explaining' crime and criminality, an integrative approach, accessible to readers who do not have a background in psychology.

Psychological Criminology highlights the contributions that psychological theory can make to the broader field of criminology; it will be of interest to students, academics, researchers and practitioners in both criminology and forensic psychology.

The Cambridge Handbook of Violent Behavior and Aggression

"This is one of the best texts I have seen in a while! It makes the world of criminology less daunting and more relevant." - Alyson S. Maida, St. John's University Introduction to Criminology, Tenth Edition, is a comprehensive introduction to the study of criminology, focusing on the vital core areas of the field—theory, method, and criminal behavior. With more attention to crime typologies than most introductory texts, Hagan and Daigle investigate all forms of criminal activity, such as organized crime, white collar crime, political crime, and environmental crime. The methods of operation, the effects on society and policy decisions, and the connection between theory and criminal behavior are all explained in a clear, accessible manner.
